

**1.6x Linear DC Fan Driver with V<sub>OUT</sub> Fully on Control**
**AP2113**

### General Description

The AP2113 is a low dropout high performance linear regulator which is specially designed to drive a DC fan, the regulator delivers output current 600mA in minimum.

The AP2113 provides low quiescent current consumption 70μA, over current limit protection and load short current protection with fold-back limitation 50mA, which are ideal for battery powered system application.

The AP2113 output voltage ( $V_{OUT}$ ) follows 1.6 times of  $V_{SET}$  input voltage until it reaches  $V_{IN}$  voltage minus dropout voltage ( $V_{DROP}$ ) at adjustable mode (set  $\overline{FON}$  pin logic high). The  $V_{SET}$  voltage must be larger than 1.0V to guarantee  $V_{OUT}$  1.6 times of  $V_{SET}$ . An  $\overline{FON}$  pin turns  $V_{OUT}$  fully on when set logic low.

The AP2113 is available in standard SOIC-8 and SOT-23-5 packages.
